# Your plan

Four questions, answered

## Each month

**£44 left over each month, after saving £75.**

| | |
|---|---|
| Take-home pay<br>a month | £3,247 › |
| Left over each month<br>after spending, debts and saving | £44 › |
| Emergency fund<br>target 3 months | 4.5 months › |

**Use your ISA allowance**
You have about £19,100 of this year's £20,000 ISA allowance left.

Edit your figures

## Debt-free

**Debt-free at 56, before you retire.**

| | |
|---|---|
| Mortgage-free<br>2044 | Age 56 › |
| Student loan repaid<br>2044 | Age 56 › |
| Other debts cleared<br>2029 | Age 41 › |

**Clear Credit card (sample) first**
It costs 7% a year, more than savings earn (3.5%), so paying extra off it is a guaranteed return.

Edit your figures

## Retirement

**Spending £1,480 a month (what you spend now) from 67, your money would last beyond 95.**

| | |
|---|---|
| Money lasts to<br>at £1,480 a month, the end of your plan | 95+ › |
| Could spend in retirement | £3,800 a month › |

Sample data loaded

Savings and pensions at 67
on course to have, today's money
**about £824k** ›

Needed by 67
in savings and pensions, to last to 95
**about £177k** ›

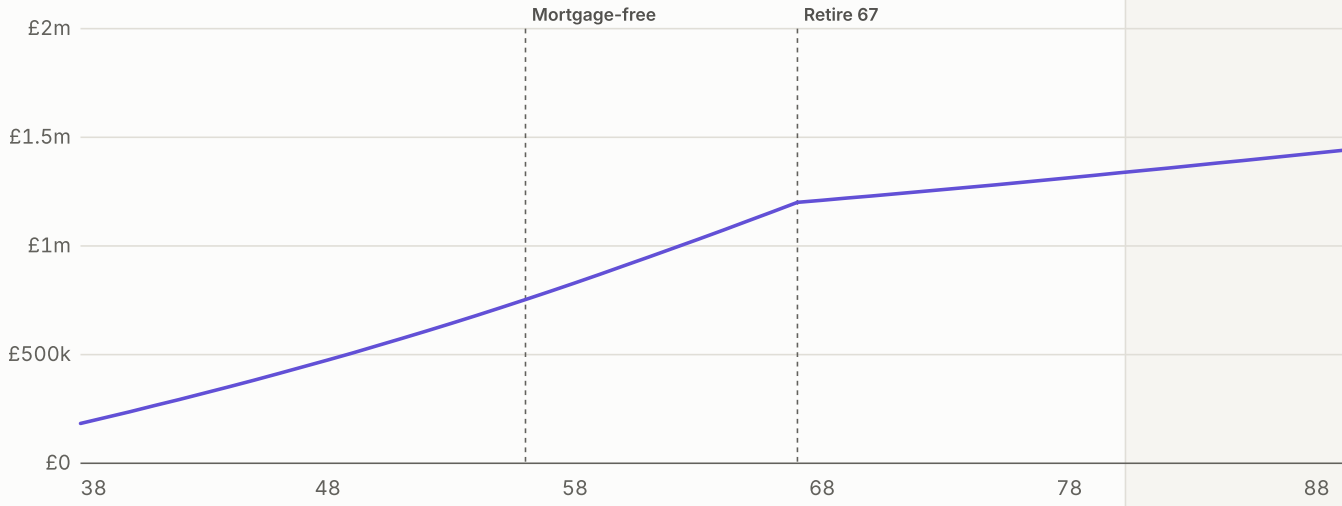

**Higher-rate pension relief**
You pay 40% tax on your top slice of pay, so each £1 into your pension costs you only about 60p (claim the extra relief through self assessment if your scheme doesn't give it).

Includes the State Pension from 67. How is this worked out?

Edit your figures

## Net worth over time

£183,500 today (£431,500 owned − £248,000 owed)

**So what:** your net worth grows from £183,500 to £1.20m when you retire at 67.

Ages along the bottom, to 95, in today's money. See the full projection
